

**Site Name:** VASQUEZ BOULEVARD AND I-70

**EPA ID:** CO0002259588

**NPL Listing Date:** 7/22/1999

**Estimated HE Under Control Date:** 6/30/2013

**Human Exposure Insufficient Data Justification Paragraph:**

There is insufficient information available to determine the site-wide Human Exposure Control status at the Vasquez Boulevard and I-70 Superfund Site. In Operable Unit (OU) 1, EPA removed contaminated soil from over 800 residences. In OU2, EPA is investigating the nature and extent of soil contamination, and whether there may be any unacceptable human exposures. In OU3, EPA is investigating the nature and extent of groundwater contamination. The community is on municipal water thus limiting exposure to groundwater. The contaminants of concern are metals. Once the investigations are complete, EPA can determine the best cleanup method for the site. Extensive community involvement has occurred at this site and continues today, especially during cleanup of residential properties.

**Actions Necessary to Move Site out of Insufficient Data:**

**Authority Responsible for the Actions Above (indicate below):**

**EPA (i.e., Fund Lead),      State Lead,      PRP Lead,      Other**

(If other, please provide details, for example: uncertainty due to ongoing negotiations, potential bankruptcy, etc.)

**Obstacles/Challenges Affecting the Ability to Move the Site out of Insufficient Data:**
